It is advisable to utilize a geographic timezone, such as "America/Los_Angeles" instead of a UTC timezone offset, like "UTC+0," while using The Modern Events Calendar. The latter may cause issues when importing events or with Daylight Saving Time.

IMPORTANT UPDATE

Keep your events running.

Update MEC & activate your license

Protect bookings. Get security fixes.

Update to the latest version.

After our recent update, key features will gradually be disabled if you haven't activated your MEC license key, and your event sales could be affected since booking is a Pro feature.

In this update, we also made important security improvements. Update MEC to the latest version to keep your website secure and benefit from the latest fixes.
